# STIC Search Results Feedback Form

**EIC 3600**

Questions about the scope or the results of the search? Contact *the EIC searcher* or contact:

Karen Lehman, EIC 3600 Team Leader  
571.272.3496 Knox suite 4B68

## Voluntary Results Feedback Form

- I am an examiner in Workgroup:  Example: 3620 (optional)
- Relevant prior art **found**, search results used as follows:
- ☐ 102 rejection
  - ☐ 103 rejection
  - ☐ Cited as being of interest.
  - ☐ Helped examiner better understand the invention.
  - ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature  
(journal articles, conference proceedings, new product announcements etc.)

- Relevant prior art **not found**:
- ☐ Results verified the lack of relevant prior art (helped determine patentability).
  - ☐ Results were not useful in determining patentability or understanding the invention.

Comments:

**Discounts** for target online teens

THAILAND: UCLICKTODAY.COM TO OFFER **DISCOUNTS**

The Nation (XBO) 06 Jun 2001 Online

Language: ENGLISH

Thailand's Grammy Entertainment has announced a new strategy to generate online **purchases** at Uclicktoday.com, its **Internet** site dedicated to teenagers. Among others, Uclicktoday.com offers computers, computer peripherals, **mobile phones** and soon, clothing, for sale. **Via** the strategy, the online retailers in the venture will set aside a budget that will be offered as **discounts** towards purchases of their products via Uclicktoday.com. The **discounts** will be offered by the online retailers to clients selected beforehand via a direct channel.

Enterprise-wide wireless technology is here to stay. Employees have a range of devices upon which to operate, from cell phones to personal digital assistants to pocket PCs and devices such as the BlackBerry. IT managers and CFOs need to sit down and figure out what they and their remote workers really need to do their jobs, calculate the cost for each remote worker, and determine what wireless devices will need to be upgraded and when. Wireless device lifecycles are an important factor, as companies do not want to spend money on hardware that will soon become obsolete or require constant upgrading. Security risks are a serious issue as well. CFOs and IT managers will soon have to deal with other emerging wireless technologies, such as Wi-Fi hot spots, or wireless network access points, and smart phones, or wireless phones that use the global positioning system (GPS) to identify location at all times. Smart phones give users the ability to send and read e-mail, Web surf, and access and use LAN applications.

RECORD TYPE: Review  
REVIEW TYPE: Product Analysis  
GRADE: Product Analysis, No Rating

SyncXML, Novell's ZenWorks, and Microsoft Windows CE are highlighted in a discussion of software that can manage mobile devices. Managing cell phones, personal digital assistants (PDAs), notebook PCs, and other mobile wireless gadgets, all of which can be easily lost and misplaced, is a daunting task, but such vendors as Mobile Automation and Novell say they can help enterprises control use of **wireless devices**. Gartner **estimates** the total **cost** of ownership for **wireless devices** at over \$4,100 per user per year. Management products available include asset management tools that allow administrators to inventory expensive mobile investments, and ones that offer ad hoc software upgrades, remote synchronization, security features, and the ability to find a lost or stolen device. However, there is no one toolset that can provide all the features and functions needed. One manager says he has to manage 500 BlackBerry handhelds for a large nonprofit health care provider. In the past only a basic software utility was used to lock each handheld after 60 minutes of idle time. However, in 2001 mFormation Enterprise Manager was deployed, which allows the manager to send a command to a lost or misplaced device that locks the device to guard confidential information. Also discussed are software distribution, asset management, and guidelines for choosing mobile device management tools. Topics covered include platform support, prices, and support for SyncML, a standard that in time could

allow synchronization of all devices and applications over any wireless network.

Abstract: Adaptive equalization of multipath fading channels using set-membership identification (SMI) is known to perform comparably to the recursive least squares algorithm while not requiring to update the equalizer parameters at every instant of time. This paper investigates a scheme, referred to as U-SHAPE, that exploits the discerning update strategy of the SMI methodology to share a few number of equalizer updating processors among many channels in a **wireless telephone** system. This **scheme** provides a significant **reduction** in the hardware requirements of a multi-access channel equalizer. A queueing model for the calls in a telephone system and an exponential decay model for the probabilities of update request are used to model the time-variation or the system parameters, and design of U-SHAPE for this model is discussed along with simulation results. **AN ECONOMIC ANALYSIS OF THE EFFECTS OF FCC REGULATION ON LAND MOBILE RADIO**

Author: ROSSTON, GREGORY LAWRENCE

Degree: PH.D.

Year: 1994

Corporate Source/Institution: STANFORD UNIVERSITY (0212)

Adviser: ROGER G. NOLL

Source: VOLUME 55/10-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3270. 177 PAGES

Descriptors: ECONOMICS, COMMERCE-BUSINESS; ECONOMICS, GENERAL

Descriptor Codes: 0505; 0501

The Federal Communications Commission (FCC) regulates the use of electromagnetic spectrum. Economists advocate regulation in cases where market forces cannot control interference or would lead to inefficient standards. This thesis examines the regulatory history for both private land mobile radio and cellular radio and undertakes empirical analysis of the provision of each service in the context of the regulations imposed on the services.

Investigation of the FCC land mobile radio regulations reveals that many do not prevent interference, do not protect a public resource and do not promote efficient standards. Although these regulations appear inefficient, given the constraints and pressures from state regulators and entrenched interests, adoption of these regulations, especially with built-in sunset provisions, was actually consistent with a move to pre-empt more inefficient regulation and a move towards the imposition of market forces. The FCC's regulation of cellular licensees reveals instances where decisions interfered with the operation of market forces, but other that indicate a move to less interfering regulation.

In private land mobile radio, the FCC artificially limits users to specific channels. The economic impact of these limitations is investigated to test the hypothesis that the FCC tried to avoid more onerous state regulation and to mollify entrenched interests. The evidence shows that the loss from these regulations appears to be relatively small. However, there are changes that could improve efficiency without risking interference or detrimentally affecting standards.

Demographic and cost characteristics are used to estimate a single period two-part pricing model for **cellular telephone** service. The **estimation** shows that cellular service is **price** elastic and that cost characteristics such as the density of the area served affect pricing. The information from this model is used to develop a simple model to explain the prices paid for cellular licenses. This estimation shows that the underlying demographic and cost characteristics explain a significant amount of the variation in license prices, but that the simple forecasting model does not add to the explanatory power. The model is used to estimate the magnitude of the value of cellular licenses given away by the government.

El gobierno rebaja el 62.5% la tasa por el uso del espectro radioele\

Spain: Government reduction of radio electric charges

Cinco Dias (CDS) 22 Sep 2001 p.2

Language: SPANISH

A radioelectric tax of Pta 60,000mn has been set by the Spanish government. Operators were not consulted prior to this decision and are demanding a

further reduction to the 62.5% which has been approved. No official comments have been made on behalf of the operators, as they await the final figures, but signs show that they are not in favour of the tax which was introduced in 2001. The government has devised a complex formula to calculate costs for mobile telephone operators. In 2002, these companies will pay the same price for each megahertz they use. In 2001, UMTS paid 27,117mn for their licence, but are now required to pay Pta 5,849mn. The cost per head for the DCS 1800 will be Pta 5,013 (Pta 5,650mn this year), a reduction of 11.3%. GSM will be charged Pta 4,005mn (Pta 5,228 this year), a reduction of 23.4%. Amena will continue to pay 10,862mn for the two licenses they have for UMTS and DCS, a reduction of 67%. Airtel will receive a reduction of 61%, requiring a payment of 14,867mn for their three licenses. Xfera will have a reduction of 78% which is the largest in the mobile phone sector, whilst local telephone operators will see the largest reduction of all, when their account is lowered to 930mn. Altogether, mobile phone services will be charged Pta 47,278mn for the use of Spanish air waves.

The price is tight

UK: MOBILE COMPANIES NEED TO RESTRUCTURE FUNDING

Guardian (GN) 29 Mar 2001 E-commerce/p.12

Language: ENGLISH

It has been estimated that it costs a mobile telephone company GBt 300.00 to acquire a customer even though the cost of the package is often far less. This is because companies have been heavily subsidising handsets (some pre pay phones cost only GBt 22.00 over Christmas). Now the rapid trend for mobile phones is waning slightly, companies are seeing results way below expectations. Orange was launched in 1994 and hoped to see profit by 1997. However, as yet, it has never made a profit as all income has been used to fund further growth. One 2 One and Vodafone have already cut subsidies, and handset manufacturers will be lobbied to cut the price of their goods. Companies are now likely to increase the length of peak hours, and sell pre-pay cards by the minute rather than by the pound.

Ericsson f6rlorar pV utdraget licensanbud

SOUTH AFRICA: ERICSSON LOSES IN LICENCE DELAY

Dagens Industri (DI) 12 Dec 2000 p.16

Language: SWEDISH

The delay in awarding a third South African mobile telephone licence has been estimated to have cost Ericsson and Nokia SEK140mn (US\$14mn). The operator licence was awarded to Saudi Arabian-South African consortium, Cell-C, in April but has been in court ever since. The loss has been realized in the purchase of property for base stations and to training and recruitment.

FSA warns on telecoms loans

UK: BANKS WARNED ABOUT LOANS TO TELECOM FIRMS

The Times (TS) 08 Dec 2000 p.27

Language: ENGLISH

Banks in the UK were warned 7 December 2000 to be cautious of their exposure to the telecoms sector by the Financial Services Authority (FSA), the UK financial watchdog. The warning comes as the value of telecoms

companies' slides as a result of the large sums paid to obtain third generation **mobile phone** licences. It is **estimated** that it will **cost** over US\$ 300bn to construct the required networks in Europe alone. Concerns have been raised that the banking industry could suffer from the collapse of the telecoms industry as banks have become increasingly dependent over the last five years. Figures released by the ratings agency, Standard & Poor's, reveals that banks have loaned around US\$ 900bn to telecoms companies since 1997, with European and US banks estimated to have loaned about US\$ 300bn each.

Ericsson kuroo Nokian etumatkaa

FINLAND: ERICSSON ON MOBILE PHONE SALES  
Iltalehti (AJT) 27 Jul 2000 p.11  
Language: FINNISH

According to Manager Peter Ehman of Ericsson Finland, the market situation in mobile phones is good for both Ericsson and Nokia on the Finnish markets. Ehman estimates that in the future consumers will favour more personal and more expensive models. The average price of terminals will increase. The **price** of WAP phones Ehman **estimates** will **decrease**. According to Ehman, **mobile phone** retailers sell the terminals at a loss as competition is tight on the Finnish markets.

Vil ha mobilt n6dnett  
NORWAY: WANTS TO BUILD EMERGENCY NETWORK  
Dagens Naeringsliv (DN) 20 Jul 2000 online  
Language: NORWEGIAN

Minister of Justice Hanne Harlem is to release a proposal to build a countrywide **mobile telephone** emergency network. The **estimated costs** for this total NOK5 bn (US\$0.6 bn). The network could help to save lives if the regular networks should fail. The network might also transmit calls made from inside all of the country's tunnels. The relief network would have 50,000 users within the fire-brigade, health services and police force. It would not be accessible to other users. According to the Department of Justice the network would be based on the Trans European Trunked Radio Access (Tetra) standard. The Norwegian-Belgian telecommunication company Sait-Stento will try to win the contract if the proposal passes.

FINLAND: MOBILE PHONE SALES 1.1MN IN 1999?  
Taloussanomat (AMB) 24 Jul 1999 p.6  
Language: FINNISH

The Finnish Association of Electronics Wholesalers estimates that 1.1 million mobile phones will be sold in Finland during 1999. The estimate has

declined from earlier forecasts of 1.3 million. In 1998, the mobile phone sales totalled 1.1 million pieces. Finnish mobile phone retailers were delivered 494,650 phones in the first half of 1999, down by 6% from the same period in 1998. The retailers **estimate** the **decrease** in **mobile phone prices** to end.

Internet-Bank startet im April  
GERMANY: FIRST INTERNET-ONLY BANK  
Frankfurter Allgemeine Zeitung (FA) 23 Mar 1999 p.23  
Language: GERMAN

Netbank AG of Frankfurt will be Germany's first bank which is to be reached exclusively via the internet, claims parent company Sparda Bank. Netbank will start operation on 15 April 1999. The bank will do without any telephone services. Therefore the bank will be able to offer "unbeatable terms" to its customers. The initial offer will include the account management via internet. From autumn 1999 portfolio management and stock trading are to complement the offer. Among other things, customers can get information concerning the current credit card charges at any time. If desired, customers can automatically get an e-mail or text message on their **mobile phone** when previously **determined** account balances or share **prices** have been reached. Instead of a conventional call centre, Netbank will offer an "electronic customer consultant" to answer questions.

WORLD: LAPTOP PC PRICES TO DROP IN 1999  
WORLD: LAPTOP PC PRICES TO DROP IN 1999  
South China Morning Post 22 Sep 1998 p.t3  
Language: ENGLISH

Customers can expect to see a price cut in laptop PCs in 1999 as Intel has announced to offer a low price chip for laptop PC priced at less than US\$1,500. Previously, Intel cut prices on its Pentium 266 MHz and Pentium II 233 MHz by 12% and 20% respectively. It would also offer a new Pentium II 300 MHz chip for laptops priced at over US\$3,000. It has also developed "Bluetooth" technology to improve mobile communications capabilities of notebook PCs via cell phones. IDC estimated low-price laptop is growing at 15%, faster than high-price laptops which grow at 10%. The future mini-notebook market will be featured by a PC less than 3 pounds and priced less than US\$2,000. Currently palm-sized computers only share 5% of portable PCs worldwide. Rising numbers of the users are female. IDC forecast 50% of Hong Kong's laptop market are priced at less than US\$2,500. Intel has several competitors in mobile chip market including Advanced Micro Devices with estimated 10% of the market. Its chips are priced at 25% less than Intel. Other rivals also include Integrated Device Technologies and new entrant like Rise Technologies. \*

FINLAND: SALES OF MOBILE PHONES UP 55% 1-5/1998  
Kauppalehti (XFD) 08 Jun 1998 p.13  
Language: FINNISH

According to information gathered by the Finnish Association for Wholesalers of Electronics, 430,000 mobile phones were sold in Finland during Jan-May 1998. The sales boosted by 55% from 1-5/1997. The estimated number of mobile phones to be sold in 1998 is approx. 1mn. In 1999 the number is estimated to be 1,1mn. The estimated value of mobile phone markets calculating from wholesale prices amounts to Fmk 1.2bn (US\$ 0.2bn) in 1998. The decline in gsm phone prices is coming to an end since consumers wish to buy quality equipment when replacing old mobile phones.

Cellular phone becomes hot item

CHINA: MOBILE PHONE USERS TO HIT 4 MN IN 1997  
China Daily (XKP) 31 Mar 1997 p.5  
Language: ENGLISH

The number of mobile phone users in China is expected to hit over 4 mn by the end of 1997, rising to between 7.2 mn and 8.65 mn by 2000. The prices of mobile phones came down a lot, from US\$2,412 to less than US\$1,205 in the past ten years. Beijing Mobile Telecom and China Unicom, the two mobile phone operators both announced to cut handset prices by US\$129 for Beijing users from March 21. The prices of mobile phones are determined by local governments. The following table shows the handset price of Motorola Ge87C in some cities. Motorola Ge87c US\$1,410 in Beijing US\$1,084 in Shanghai US\$964 in Tianjin \*

Satelliitit varmistavat jatkossa yhteyksiU

FINLAND:SATELLITES FOR MOBILE-PHONE COMMUNICATION  
Tietoviikko (ZPX) 7 Jun 1996 p.3,4  
Language: FINNISH

Over the next few years, hundreds of telecommunication satellites will be built to orbit the earth in order to secure **mobile - phone** communications irrespective of location. **Estimated costs** of the projects are US\$ 2-3.6bn. For example Finland's Nokia and Sweden's Ericsson are already planning equipment technology. Telecom Finland, <major Finnish telecom operator>, is involved in I-CO Global Communications which will be launching 12 satellites on two 10,000-kilometer-high paths by the year 2000. The system will be a global one. Radiolinja of the rivaling Finnet Group, on the other hand, participates in Globalstar which is financed by mainly Qualcomm from the USA. Also participating are e.g. Alcatel and France Telecom. The service is scheduled to be introduced commercially in early 1998. Globalstar will start with a total of 32 satellites, but the number of satellites will be later boosted to 48. The system will be worldwide with the exception of the polar areas. The Iridium project of Motorola and Japanese companies aims at global service with 66 satellites. Ellipso of Ellipsat, Odyssey of TRW and Aries of Constellation need 12-48 satellites.

Government rescues BT from EU directive

EUROPE: TELECOMS SECURITY MEASURES SET BY EU  
Computer Weekly (CRW) 06 Jun 1996 p.4  
Language: ENGLISH

New security measures laid down by the European Union (EU) will **cost** **mobile phone** operators an **estimated** GBt 1-2mn and other telecoms companies GBt 38mn for initial network upgrades, in addition to annual maintenance costs of up to GBt 52mn. The new regulation stipulates that telecoms operators must alert users to risks of security breaches and suggest solutions, noting costs involved. This replaces the more costly suggestion that operators provide encryption in circumstances where personal data is at risk on ISDN networks. British Telecom (BT), the UK operator, would have had an estimated outlay of GBt 2.5mn if the former directive had been passed.

UTOKAT SAMARBETS SKA GE EUROPOLITAN FLER KUNDER

SWEDEN: PLANS FOR EUROPOLITAN DURING 1996

Dagens Industri (DI) 28 Dec 1995 s. 7

Language: SWEDISH

The mobile phone operator Europolitan hopes that its co-operation with France Telecom and TeleNordia will result in new customers, according to its MD Tomas Isaksson. Europolitan had some 128 000 subscribers during September 1995, or around 15 percent of the market, while its two competitors Telia had around 455 000 subscribers (around 45 percent) and Comviq 405 000 subscribers (around 40 percent). Mr. Isaksson now thinks that Europolitan will have more than 150 000 customers before the end of this year. The two main owners, Airtouch and Vodafone, are said to implement a "slow strategy" for the Swedish market, and concentrate on technical standard. Each private subscriber is said to cost Europolitan 3000 SEK in instalment costs, and then yield some 200 SEK returns per month on average. The company has some 65 percent private subscribers and has paid out some 250 million SEK (around 37,7 million US\$) in sales subventions during 1995. But Europolitan is the only mobile phone service that offers ISO 90001-certified standard, and was the first to enable users to send short text messages. "Without doubt" Mr. Isaksson thinks that his company is technologically superior, and during 1996, **prices for mobile phone units are estimated** to drop with some 15 to 20 percent, thus demanding less subvention of sales. He also believes that the entire Swedish mobile phone market will grow with some 700 000 subscribers during 1996.

Kansankdnnnykdn hinta on aluksi ldhes 2 000 mk

FINLAND: NOKIA TO LAUNCH NO-FRILLS MOBILE PHONE

Aamulehti (XFA) 8 Nov 1995 p. 13

Language: FINNISH

Nokia, <major Finnish mobile-phone maker> will introduce 'Ringo', a no-frills mobile telephone of the NMT 900 standard, in late November 1995. The mobile phone will be priced at slightly less than FMk 2,000 (US\$ 465.1) - retailers expected the price to be even lower. Harri Hukkanen, sales director for Nokia Mobile Phones, says the **price** will be eventually **determined** by the market and it is not possible for the manufacturer to set the price. According to mobile-phone retailers, the new product is of great significance as it makes it possible to sell mobile phones in department stores. Jarmo Himma, marketing director of the mobile-phone service of Telecom Finland, expects 20,000-30,000 new 'Ringo' subscriptions to be bought before year-end 1995. The forecast is based on the ease of purchasing the phone as well as the competitive price. 'Ringo' was developed by Telecom Finland and Nokia in cooperation. According to the companies, other mobile-phone producers are expected to respond by

launching equivalent products.

In Italia telefono a caro prezzo

ITALY: TELEPHONE CHARGES PROFILED

Il Sole 24 Ore (ISO) 16 Jun 1994 p.8

Language: ITALIAN

Italy's telephone charges are some 10% above the EU average according to a study by the UK firm Tarifica-Omni Com-Sтивенage. The study, which uses June 1 1994 telephone charges converted into US dollars as a reference, concludes that Spain has Europe's highest telephone charges, and the two UK telecoms groups Bt and Mercury the lowest. However, a similar study, using sterling-converted charges however, by the UK firm, Cambridge-based Analysys, concludes that Italy's telephone charges are higher than those of Germany, thus inverting the order in Tarifica-Omni's study. A third study, which **calculates the cost of a GSM cellular telephone** with 30 min/day of peak-time calls, indicates that SIP, which operates Italy's GSM network, is eighth- ranking in Europe as regards costs, well behind the two German and French groups which operate GSM networks in their respective countries.

SID TELECON TO DISTRIBUTE SAMSUNG MOBILE PHONES

BRAZIL - SID TELECON TO DISTRIBUTE SAMSUNG MOBILE PHONES

Gazeta Mercantil (GM) 29 May 1991 ps1

Language: Brazilian

Sid Telecon, telecoms member of the Machline group, will distribute Samsung (Korea) mobile telephone terminals in Brazil, and aims to capture a 25% share of the **mobile phone market estimated** at nearly 100k units.

**Prices** of its portable phones range from about USDlr2,500-3k. Nec do Brasil, telecoms concern, is offering three models of portable and car phones from its Japanese parent company, with prices ranging from USDlr700-1,900. Nec won the USDlr64 mil competition to install a cellular telephone network in Rio de Janeiro, Brazil. The mobile phone system in Rio de Janeiro was financed by Nisho Iwai (Japan), trading company, and uses the same technology as Advanced Mobile Phone System (US). Nec holds 60% of the Brazilian terminals market. Other firms operating in the mobile phones sector in Brazil include Villares Control, with Motorola (US) equipment, and Elebra Telecon, member of the Standard Telecomunicacoes group, which won the USDlr40 mil competition to install the mobile phone network in the Federal District, with technology from Novatel (Canada).
